

## **MoBar App review feedback**

The following observations have been made with regard to MoBar App during demo with client / App Owner, Mr.Ashish. These have to be fixed on priority along with API integration work that is in progress.

### **1) All fonts and colors to be strictly same as in Figma, including the text box designs**

(e.g shadows below box)

### **2) Home Screen:**

- a) Top header (alongwith cart and notifications icons) to be kept fixed while the rest of the screen can be scrollable
- b) Top Carousel Images are overlapping each other. Maintain space between images and ensure swipe should not stop in middle of image. It should show full image after swipe.
- c) Product category carousel: Products in the carousel should have multiple colors boxes. Currently all products have same color boxes (orange or brown). Use different colors within each category to make it look vibrant.
- d) Product category carousel: When we swipe to left side, the category changes automatically (whiskey --> wine --> beer --> cocktail). But when we swipe to right side it does not change (cocktail --> beer --> wine --> whiskey). Category has to be manually clicked to change.
- e) Combos: "Redeem Now" text to be removed
- f) Combos: Combos images should not move when upper product category carousel is swiped in any direction. They should remain static.
- g) Bars: When you click on the Bar image, the app closes itself. This happens on all screens - promotions, bar details etc.
- h) The lowermost image on Home Screen will be for "Invite Your Friends"

3) Search: During scroll down or up, lot of flickering is seen

4) My Profile: Date of birth to be displayed in DD-MM-YYYY format

5) Change password not working, gives "current password does not match" error

6) About: All information to be displayed on mobile app instead of redirecting to website i.e About Mobar, Terms and conditions, Privacy policy.
